

**DATA INTEGRATION
CASE STUDY**

CONTEXT

Need for a platform that unifies isolated systems, data from various heterogenous sources, and teams to create a 360° view of end customers.

THE CHALLENGE

To provide an efficient automated way to overcome silos of data, business rules, and processes, with one stop integration & a single point of control over customers data and operations in their heterogeneous environment

THE SOLUTION

A SaaS based Customer Engagement Hub that connects instantly to any applications, streaming data, on-premise, and custom enterprise systems. The engagement hub helps customers to building integrations which integrates with any application that impacts their customer's experience.

TECH STACK FOR INTEGRATION

AMAZON WEB SERVICES, DATABASE & PROGRAMMING LANGUAGE

Elastic Compute Cloud (EC2)

Simple Storage Device (S3)

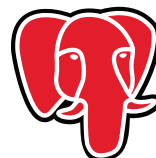

Simple Queue Service (SQS)

Dynamo DB

Simple Work Flow (SWF)

PostgreSQL

Java

Quick Facts!

50+

Total number of integration types

THE SOLUTION

INSTANT CONNECTION

Authorize integrations via secure OAuth or API key to connect to systems in minutes and not weeks.

BI-DIRECTIONAL SYNC

Two-way integrations pull and push data and actions between any connected systems.

FULLY MANAGED

Client integrations adapt as underlying source systems change. No more integration maintenance.

SUPPORT FOR CUSTOMIZATION

Client integrations support all data structures, schema, and custom objects, right out of the box.

SELECTIVE SYNC

Easily select which objects to use. You have total control over data filtering, fetch frequency, and access.

SECURE AND COMPLIANT

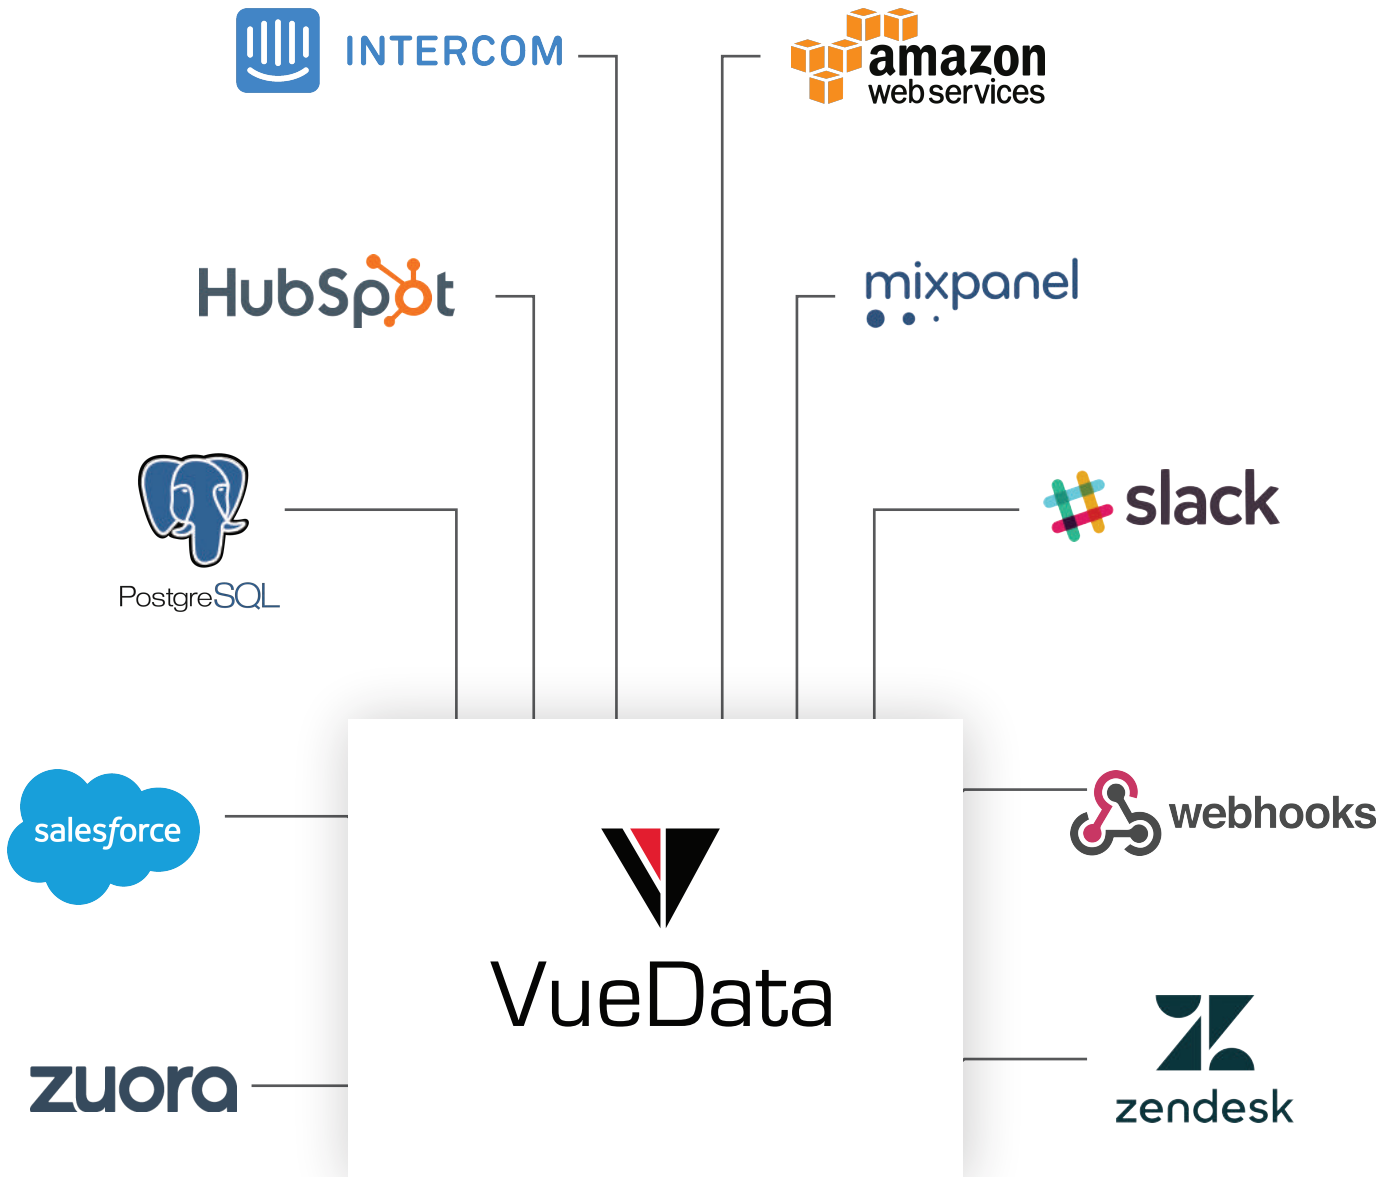

All data is fully encrypted in transit and at rest. Client is SOC 2 Type II attested in security, availability, and confidentiality.

Get more value from your existing SaaS and on-prem systems, and act on your customer data in real-time. No engineering required.
